

Food Thermometer

How to Use a Food Thermometer

Before using a food thermometer, read the manufacturer's instructions. Read about how far to insert the thermometer in a food to get an accurate reading. Follow these simple steps to ensure you are correctly using a food thermometer:

- 1. Test.** Use either ice water or boiling water to confirm your food thermometer is accurate.
- 2. Proper placement.** Placement is very important to get an accurate reading. Place the food thermometer in the thickest part of the food, making sure not to touch bone, fat or gristle.

3. Get an accurate reading. Wait 5–10 seconds before reading temperature.

4. Care & Cleaning. Clean your food thermometer with hot, soapy water after each use. This prevents cross-contamination and the spread of harmful bacteria.

 Must remove protective battery sticker before using.
TWIST CAP

NOTE: This thermometer uses one (1) LR44 battery.
